

Tiled Matrix Multiplication: $C = A \times B$

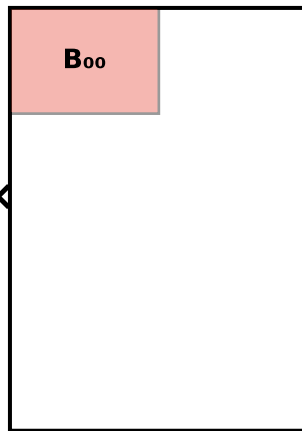

A

B

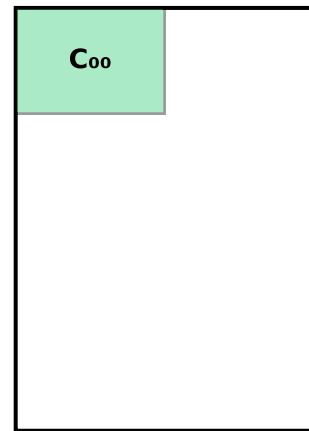

C

×

=

1. Load **A₀₀**, **B₀₀** tiles into shared memory

2. Compute partial sums for **C₀₀**

3. Load next tiles (**A₀₁**, **B₁₀**), add to tile

4. Repeat until full row/column covered

SRAM / Shared Memory

(load tiles once, reuse many times)
