

Wave Quantization on an A100 (108 SMs)

98 tiles → 1 wave fits in 108 SMs

120 tiles → 2 waves needed

All SMs busy; no tail wave

Wave 1: 108 SMs, Wave 2: only 12 SMs (≈90% idle!)

Wave quantization: when tile count is not a multiple of SM count, the last wave runs with low occupancy, creating periodic throughput drops.
