

Tactical vs Strategic Programming

Agent leverage rises when humans shape the work before tactical execution begins.

Tactical programming

Unit of work

edits, syntax, bugs, commits

Core question

How do I make this change?

Agent role

fast implementer

Human leverage

review local output

Main failure

buggy patch

Strategic programming

architecture, boundaries, scope

Which change should exist?

delegatee inside a plan

shape task, interface, tests

wrong problem or vague task

Delegation rule

design hard parts up front; agent handles scoped tactical work
