

Human labels vs. judge labels

Toy demo from six failed traces: 2 / 6 disagreements

example	human	judge	status
TSLA	actionable	actionable	agree ?
META	not actionable	actionable	disagree x
GOOGL	not actionable	not actionable	agree ?
AMZN	actionable	not actionable	disagree x
NVDA	not actionable	not actionable	agree ?
AAPL	actionable	actionable	agree ?

The important object is the disagreement row: inspect output, explanation, trace evidence, and rubric wording.
