

Confusion matrix for an LLM judge

Positive class = failure / needs review

		Judge prediction	
		failure	pass
Human label	failure	TP judge flags a real failure	FP judge over-flags a pass
	pass	FN judge misses a failure	TN judge passes a real pass

$$\text{Precision} = \text{TP} / (\text{TP} + \text{FP})$$

$$\text{Recall} = \text{TP} / (\text{TP} + \text{FN})$$

Precision controls false alarms; recall controls missed failures.
