

# Meta-evals can validate more than a judge

Q&A expanded meta-evaluation from label agreement to process and configuration checks

## Judge validation

Golden labels  
Human annotations  
Precision / recall

## Consistency meta-eval

Same input, K runs  
Agreement between scopes  
Stability signal

Evidence target: labels, repeated outputs, candidate configs, or intermediate reasoning

## Configuration meta-eval

Prompt variations  
Model/tool choices  
Pairwise winner

## Process meta-eval

Intermediate plans  
Missing constraints  
Solving steps
