

Tool filtering protects the context budget

Many available tools can still be a poor loaded tool set.

Load all 69 tools

High context cost
More choice noise
Irrelevant descriptions crowd the prompt

filter

Load only task tools

Example: search + scrape markdown
Lower context cost
Cleaner action space

Context cost model

$$Cost_{context}(Q) \propto \sum_{q \in Q} tokens(q)$$

Goal: keep required capability while reducing prompt load.
